Dear Teja,

**Kindly confirm the details below regarding the pay rate and Right to Represent for the following opportunity for your consultant Sujitha Sivanesan**

---

**Right to Represent and Pay Rate Confirmation**

**I, Teja, confirm my consent to the following:**

- Pay Rate: \$60/hr C2C
- Exclusive Authorization: I hereby authorize Flexon Technologies to exclusively represent me for the position of Onsite LLM QE Engineer with TCS/Apple, for the role based in Sunnyvale, CA on a Contract basis.

**I also agree to undergo any background checks and drug testing required by the client if my profile is shortlisted.**

**Furthermore, I confirm that I have not submitted, nor will I submit my resume to any other vendor for this specific opportunity to avoid any duplication of submission for this requisition.**

Sincerely,

Teja

**Job Title: LLM QE Engineer**  
**Location: Sunnyvale, CA / Austin, TX (Onsite)**  
**Duration: Long-Term Contract**  
**Client: TCS / Apple**

**Job Summary:**

We are seeking highly skilled and motivated LLM QE (Large Language Model Quality Engineering) Engineers to join our team supporting a prestigious client in the tech industry. The ideal candidates will have hands-on experience in testing LLM-based applications and working with tools such as LangSmith and promptfoo. This is an exciting opportunity to contribute to cutting-edge AI/ML projects at scale.

**Key Responsibilities:**

- Design, implement, and maintain robust test plans and test cases for LLM-based systems.
- Utilize LLM testing tools like LangSmith and promptfoo to evaluate prompt quality, hallucinations, consistency, and overall LLM behavior.
- Perform regression, functional, and performance testing on LLM-integrated applications.
- Collaborate with cross-functional teams including AI/ML engineers, product managers, and DevOps to ensure quality and reliability.
- Analyze and triage test results, raise issues, and drive resolutions.
- Contribute to automation frameworks for continuous validation of LLM responses.
- Monitor model performance in production and assist with quality assurance metrics.

**Required Skills & Qualifications:**

- 3+ years of experience in Quality Engineering, with a focus on AI/ML or LLM systems.
- Proven experience with LangSmith, promptfoo, or other LLM evaluation/testing frameworks.
- Strong understanding of LLM evaluation methodologies (e.g., hallucination detection, truthfulness, prompt engineering).
- Proficiency in Python or relevant scripting languages.
- Familiarity with CI/CD pipelines and QA automation frameworks.
- Experience working in Agile/Scrum environments.
- Excellent analytical, debugging, and problem-solving skills.
- Strong verbal and written communication skills.

**Preferred Qualifications:**

- Prior experience testing products involving OpenAI, Anthropic, or similar LLM APIs.
- Familiarity with Reinforcement Learning from Human Feedback (RLHF).
- Exposure to vector databases (e.g., Pinecone, FAISS) and retrieval-augmented generation (RAG) pipelines.
- Knowledge of Apple ecosystem and developer tools is a plus.
